 **amca**insite

 **AHR**EXPO *Atlanta*
FEB 6-8

Lisa Cherney

Education Manager, AMCA International
Session Moderator

- Joined AMCA in February 2019
- Responsible for development of AMCA's education programs; staff liaison for the Education & Training Committee
- Projects include webinars, online education modules, presentations at trade shows, AMCA Speakers Network and many other items.

Participation Guidelines

- Please place your cell phone on silent or vibrate.
- There will be Q&A at the end of the session.
- To receive PDH credit for attending:
 - Be sure to have your badge scanned by a room monitor so a complete attendee list can be generated.
 - You must be present for the entire session and complete a post-session online evaluation. Partial credit cannot be given for anyone who arrives late, leaves early or does not complete the evaluation.
 - There will be a QR code for the survey on screen at the end of the presentation, and a link will be emailed to everyone within 2 weeks. The survey must be completed to qualify for today's PDH credit. If you do not want PDH credit, completing the survey is optional, and your feedback is greatly appreciated.

AMCA International has met the standards and requirements of the Registered Continuing Education Program. Credit earned on completion of this program will be reported to RCEP at RCEP.net. A certificate of completion will be issued to each participant. As such, it does not include content that may be deemed or construed to be an approval or endorsement by the RCEP.

*Attendance for the entire presentation
AND a completed evaluation are required
for PDH credit to be issued.*

David Maletich

Vice President Engineering The New York Blower Company

- Over 32 years in the fan industry; experience adapting fans to various industrial, municipal & power applications
- Current ASME Nuclear Air and Gas Treatment “Conagt” committee member and member of various AMCA committees, including the Electronic Catalog Advisory Team, North America Fan Rebate Committee, and the NA Marketing Committee
- Presents fan-related seminars for AMCA, ASHRAE, OSHA, ACGIH, the Industrial Ventilation Conference, universities and engineering firms

Mike Humann

Director- Products and Applications The New York Blower Company

- Over 12 years in the fan industry
- Areas of expertise include fan troubleshooting, custom fans, fan mechanical design and fan applications
- Bachelor of Science from Elmhurst College in IL, with concentration in Physics
- Mike is a member of the AMCA Industrial Manufacturers Marketing Group
- Has presented at multiple industry conferences and training sessions on fan applications, custom fan modifications and fan system effects

Fan Troubleshooting and System Effects

Purpose and Learning Objectives

The purpose of this presentation is to inform industry professionals on the causes of system effect, and how to recognize and minimize these effects.

At the end of this presentation you will be able to:

1. Outline how fans are tested and rated in accordance with AMCA Standards 210 & 211.
2. Describe how ductwork configurations are affected by the placement of inlet & outlet elbows.
3. Compare system effect (in-situ) performance vs. catalog fan performance.

Test Lab:

AMCA Accredited Test Lab

(Fan Set-up for Testing)

Ideal Conditions

- Open inlet
- Straight run of ductwork from the outlet
- Run of Outlet duct allows the velocity profile to even out before entering the chamber.
- Fan catalog performance is tested in this manor.

Test Lab:

AMCA Accredited Test Lab

(Drive Side View of Test Set-up)

- Torque measuring device to calculate BHP (or kW) consumption.

Test Lab:

AMCA Accredited Test Lab (Chamber)

- On the other side of the bulkhead, lies the test chamber.
- The exhaust fan is used to overcome the resistance within the chamber and allow for a complete curve to be generated from closed off to wide open.

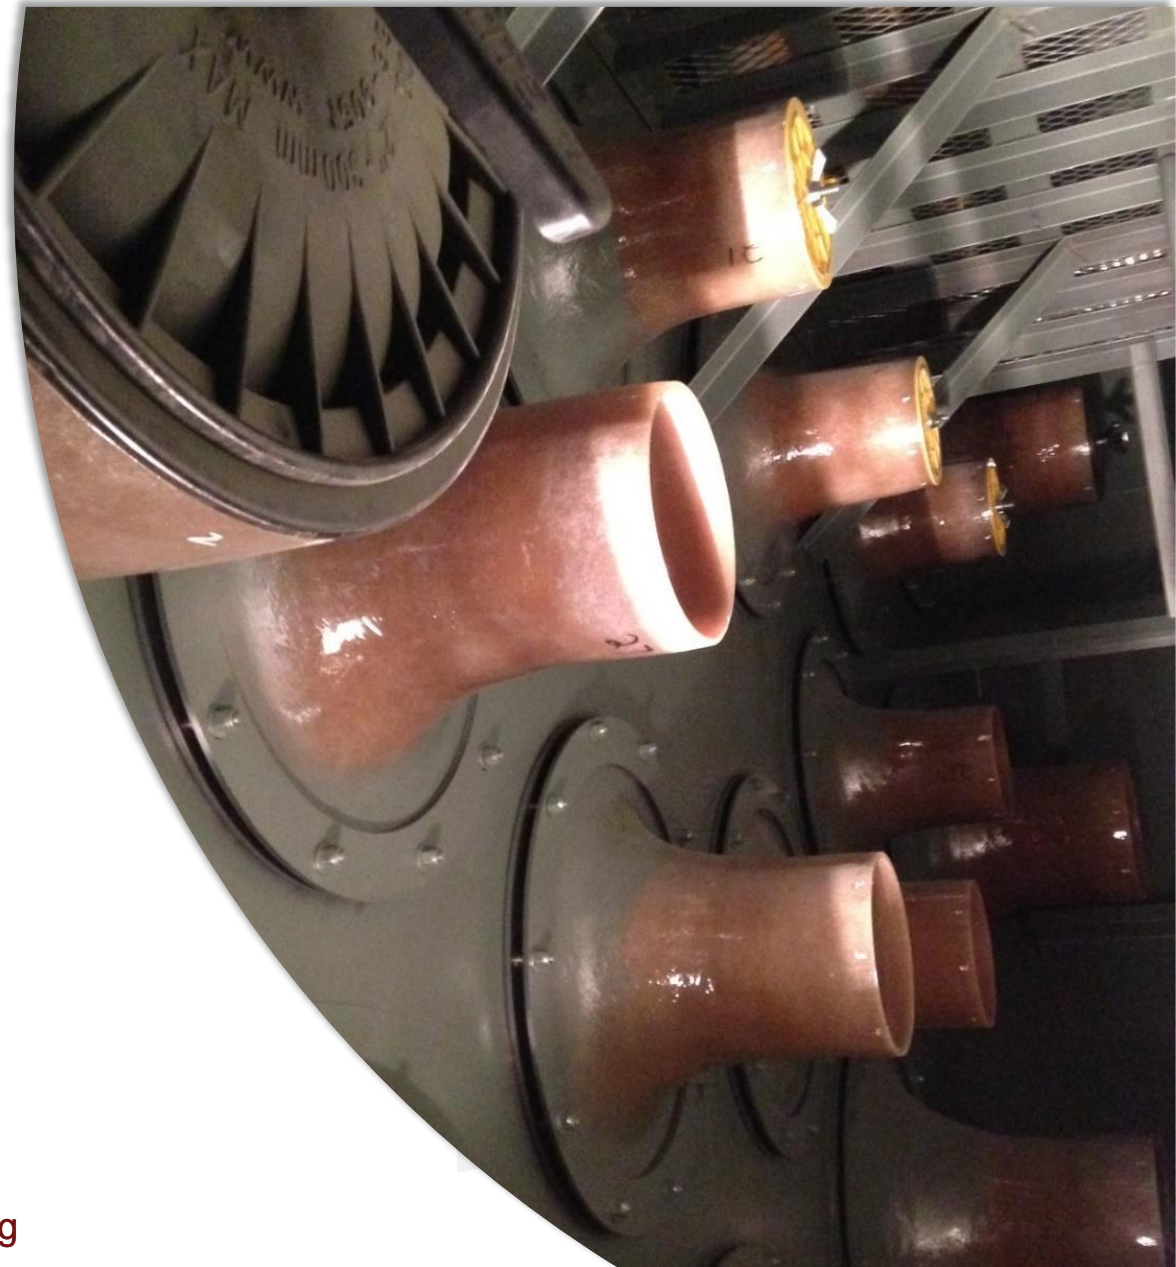

Test Lab:

AMCA Accredited Test Lab

(Test Chamber – continue)

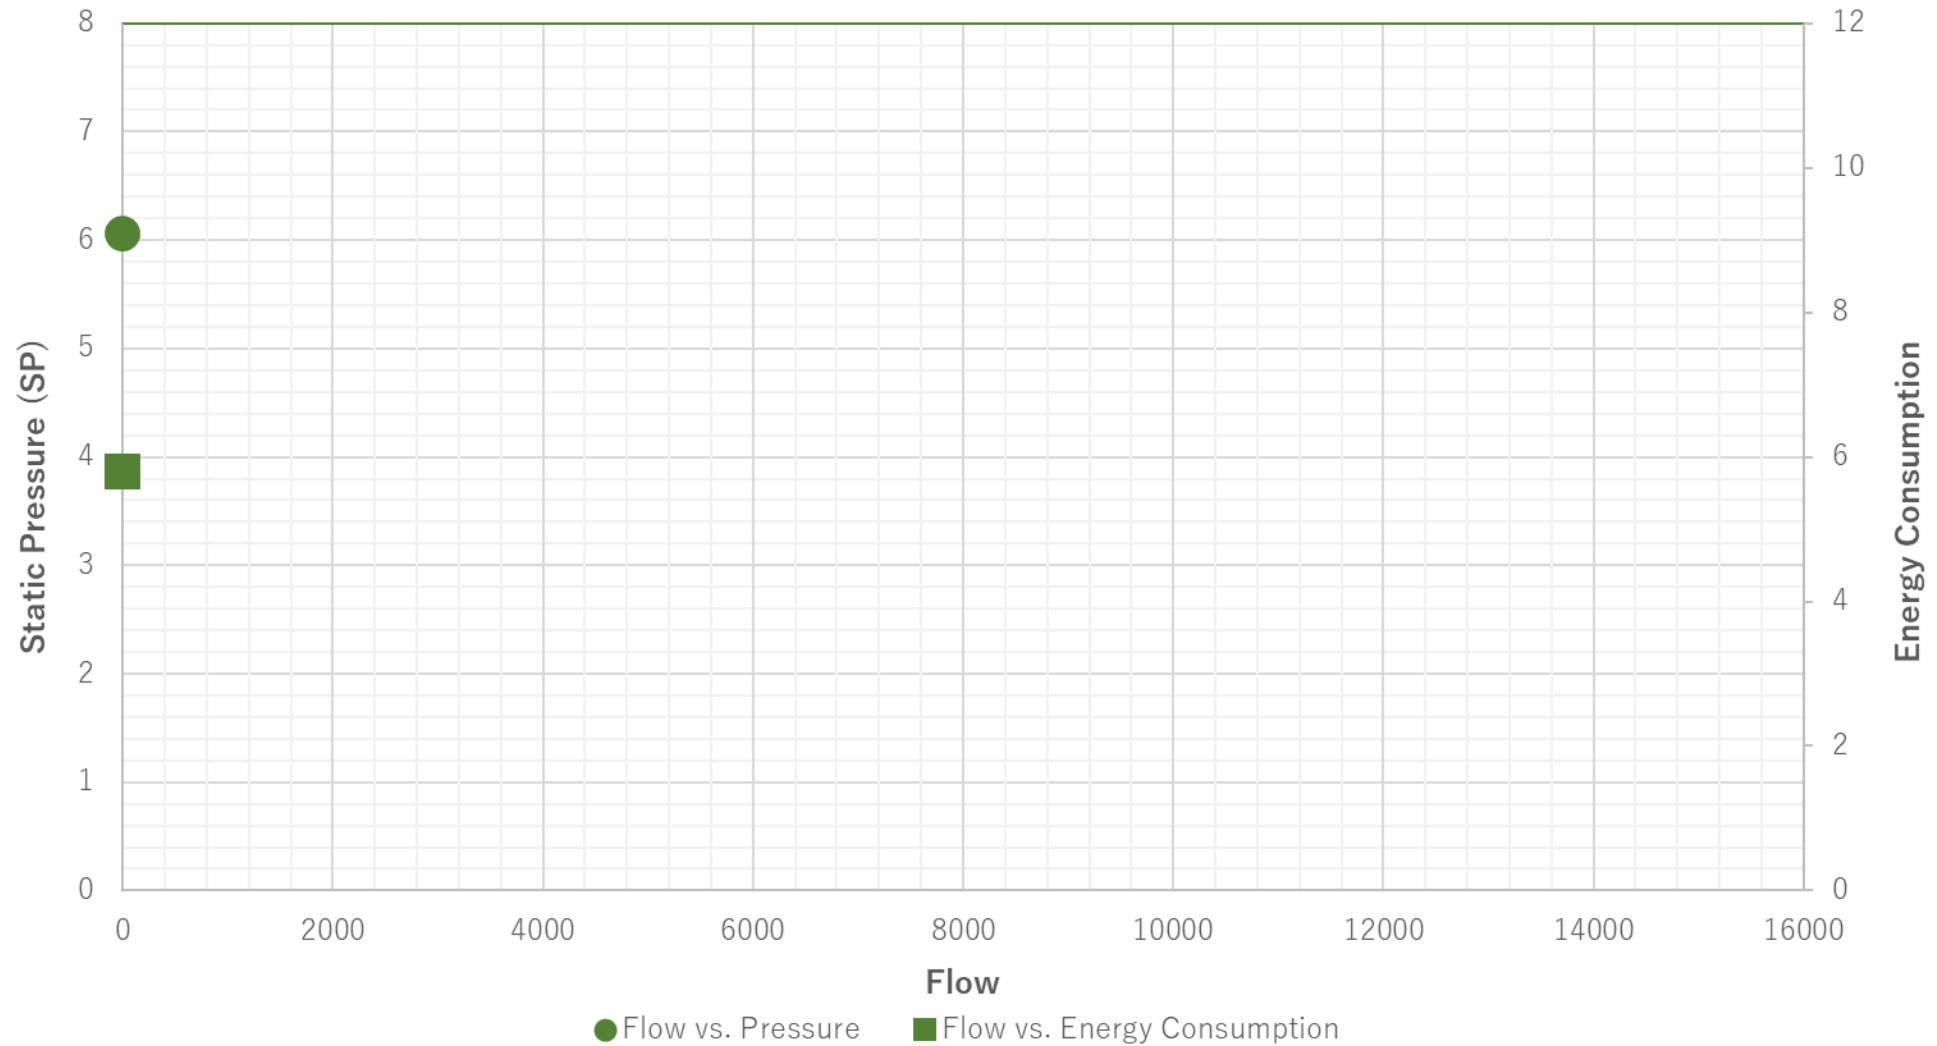

- Nozzles within the chamber are opened up or left closed depending on the air flow capabilities of the fan.
- Enough nozzles are opened to handle the theoretical wide-open flow for the fan being tested.
- Some nozzles will have to be closed to accommodate lower flow conditions being tested

Testing and Rating

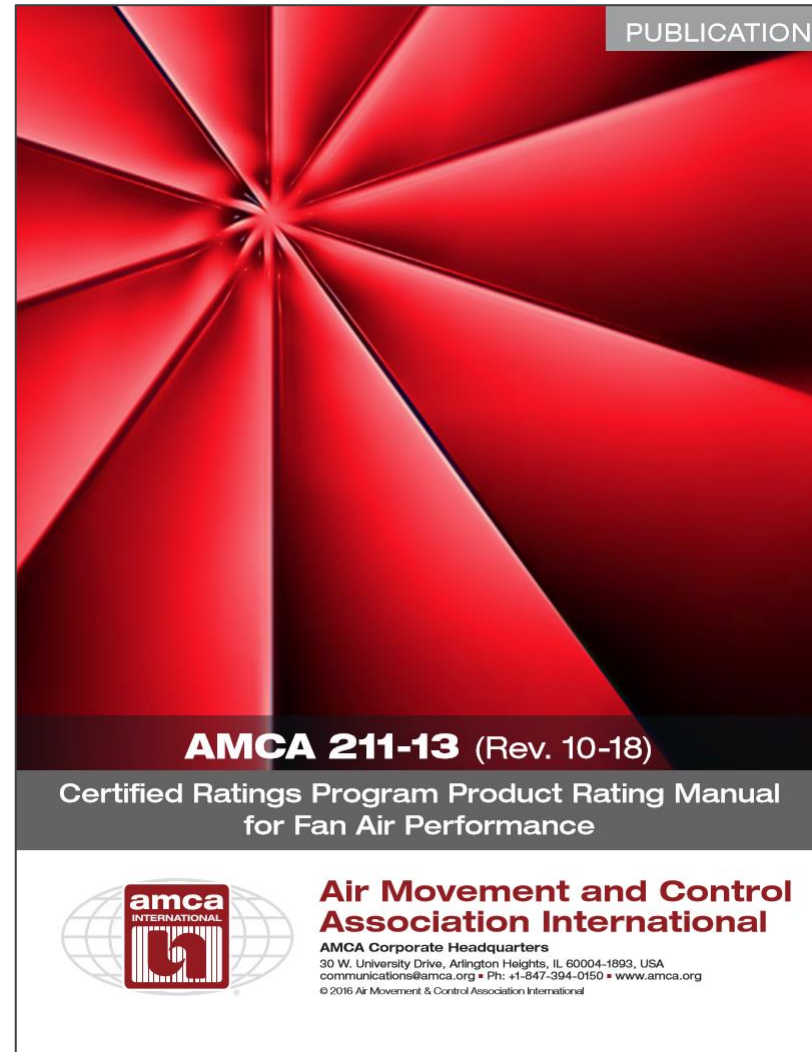

Testing and Rating:

- Tested:
- In Accordance with AMCA Standard 210 (ASHRAE 51)

Testing and Rating:

- Tested:
- In Accordance with AMCA Standard 210 (ASHRAE 51-07)
- Rated:
- In Accordance with AMCA Publication 211

Testing and Rating:

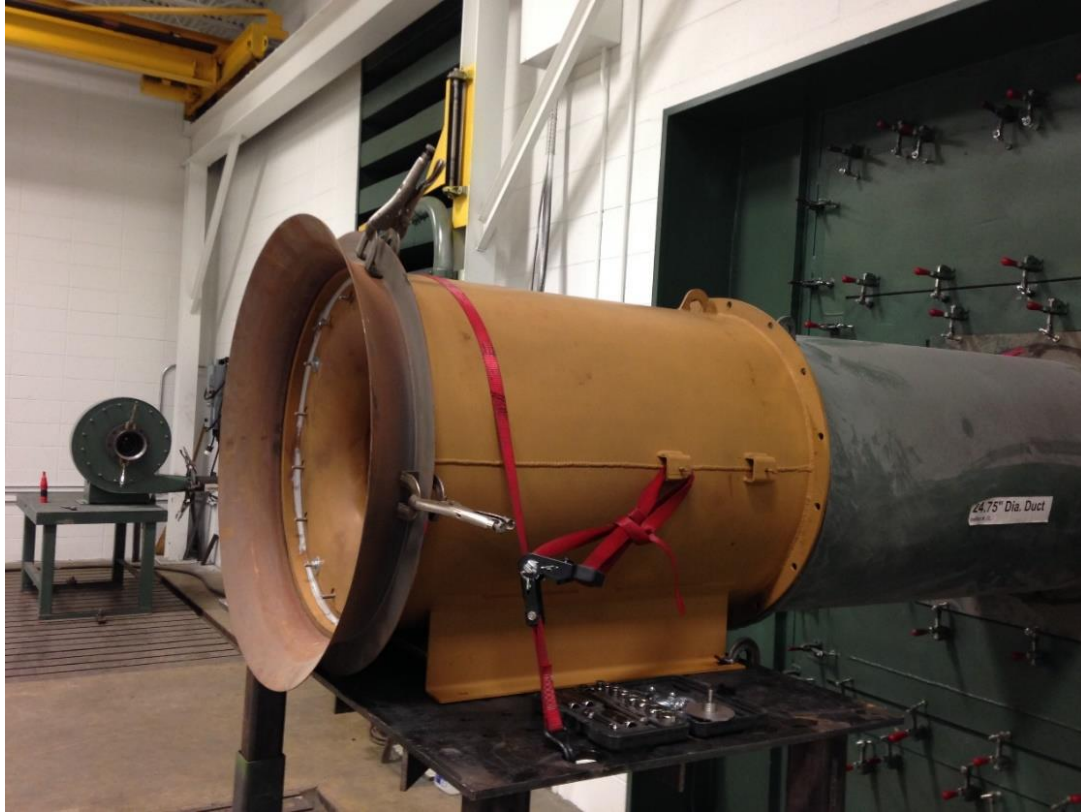

Check Test (AMCA Standard 211)

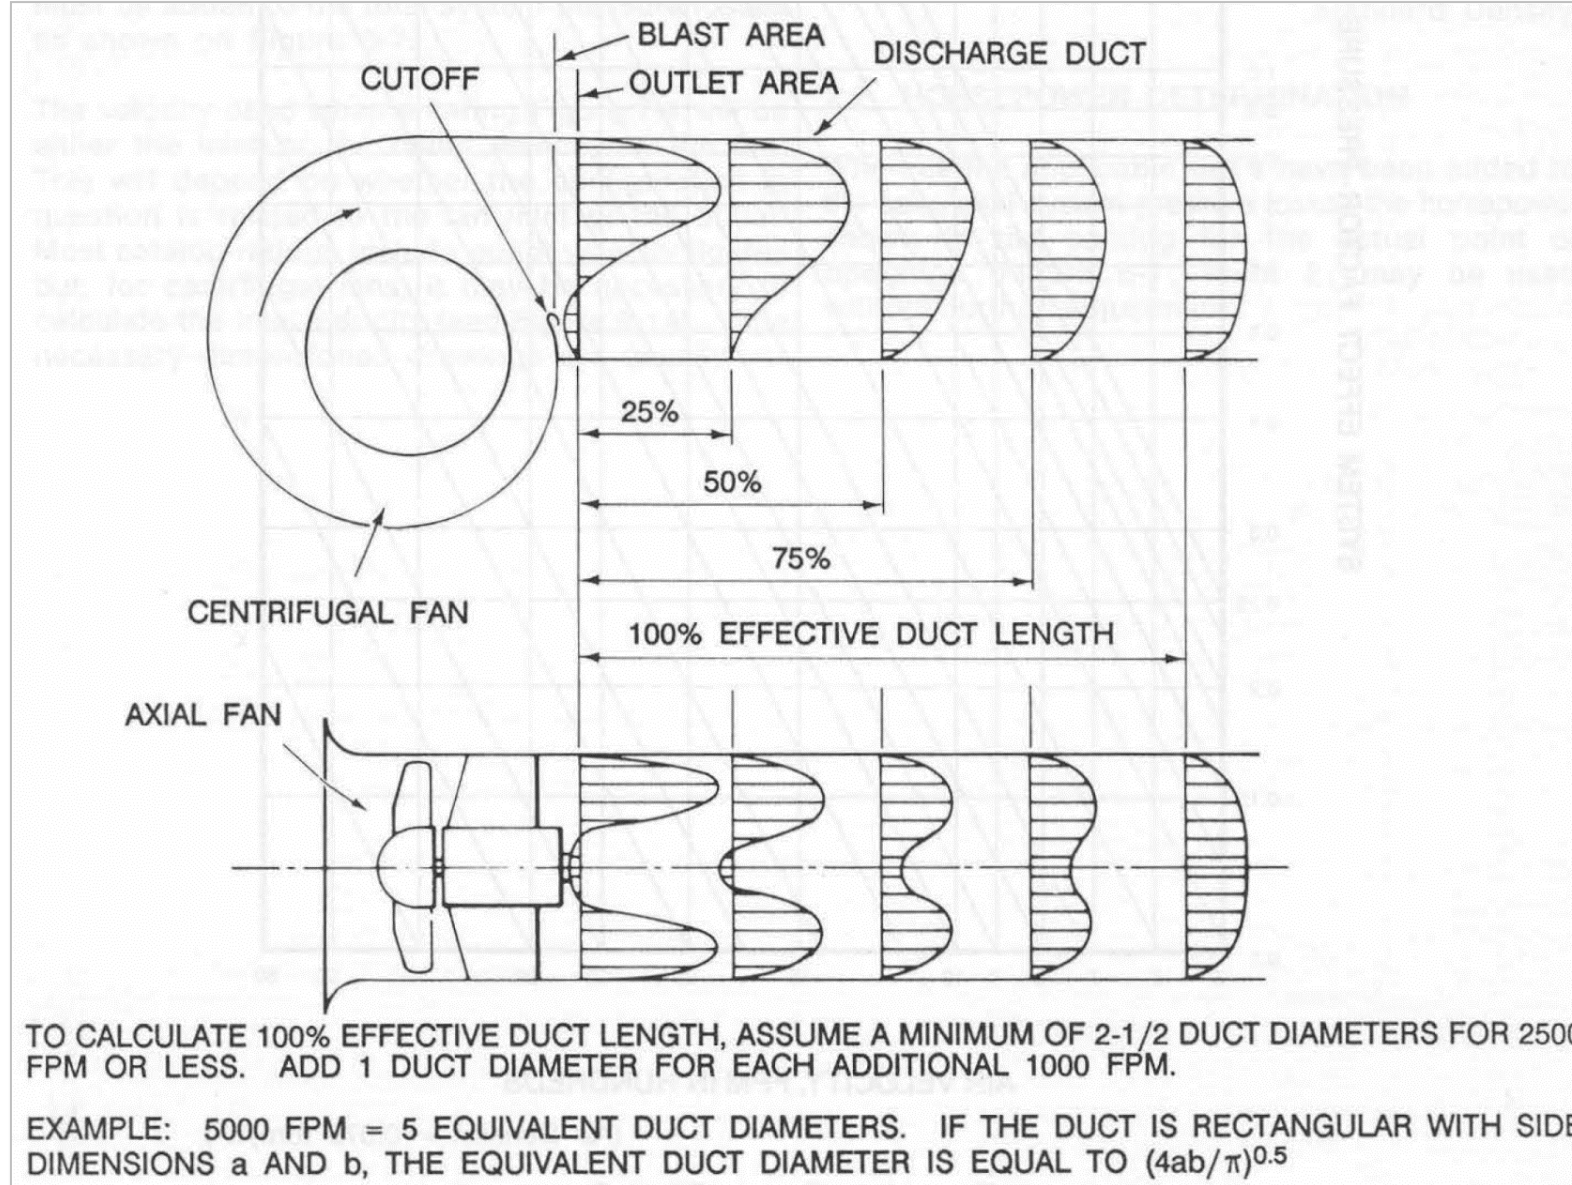

System Effects

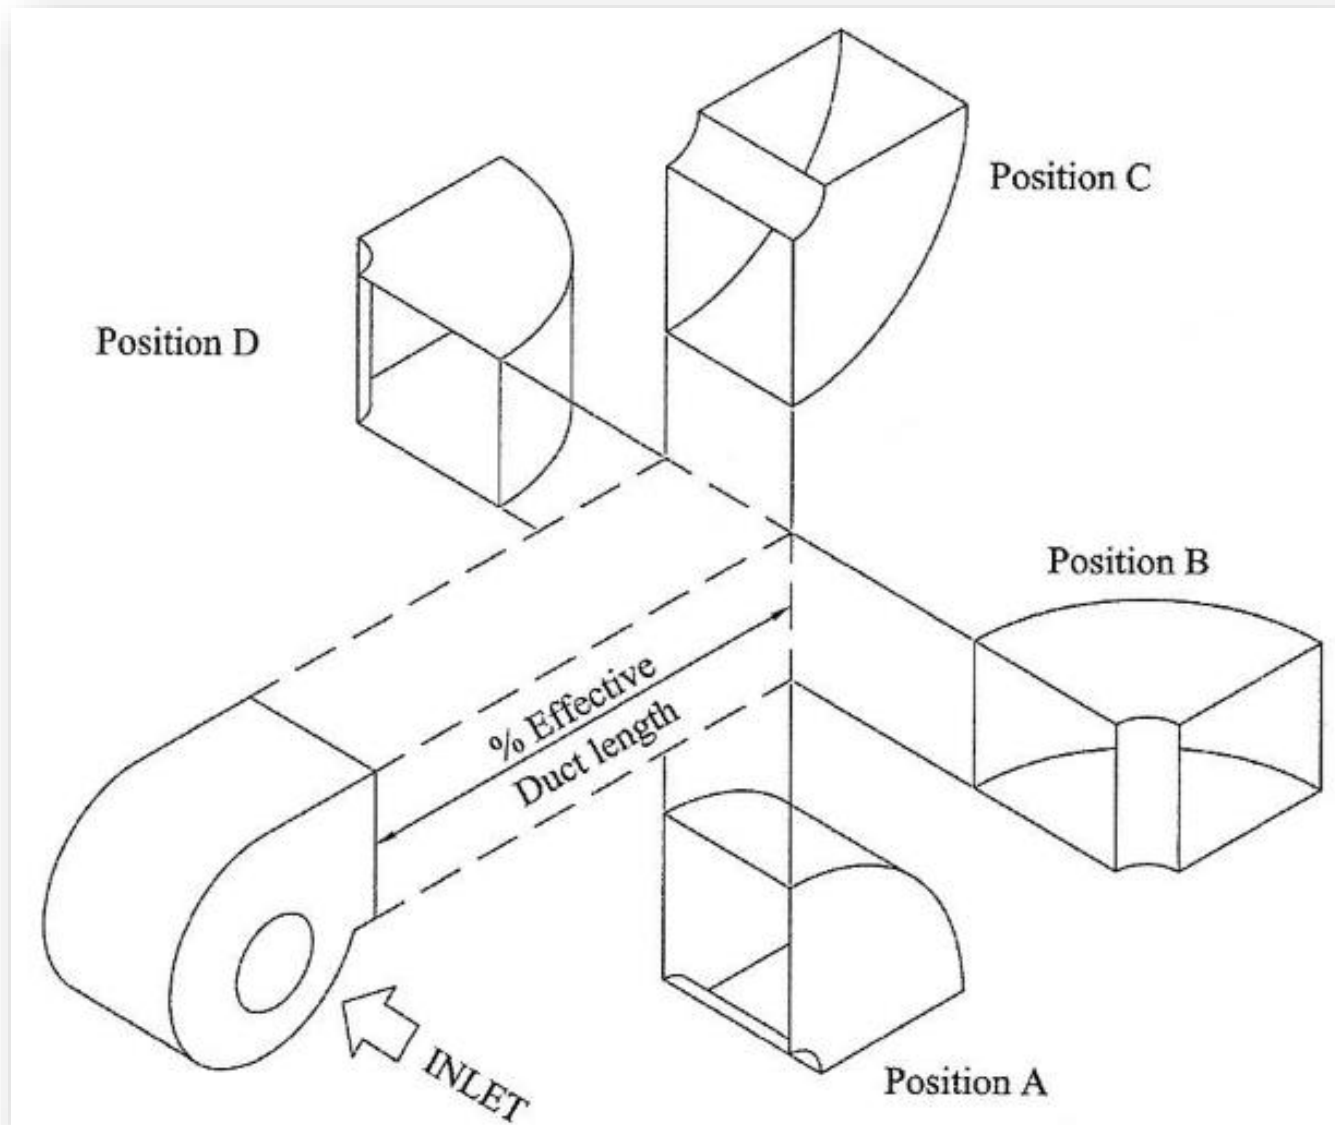

System Effects:

System Effects:

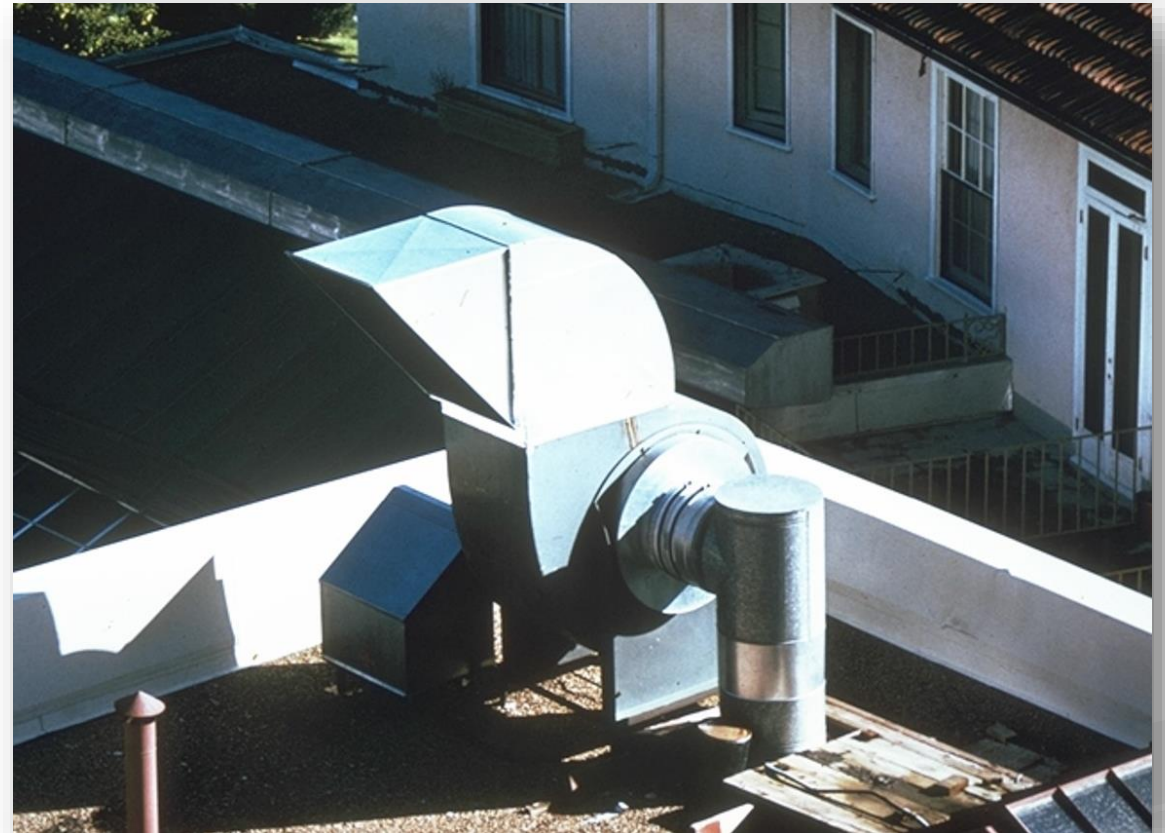

System Effects:

System Effects:

Turned Outlet Away From Neighbors to Reduce Nuisance Noise

- **Unfavorable conditions:**
 - Abrupt 90-degree elbow at inlet
 - Less than half of surface area of inlet seeing air
 - Outlet turned against the rotation of the area
- **Better solution:**
 - CW fan
 - TH discharge
 - Improve inlet condition (larger duct diameter, increased number or gores)

System Effects:

- **Unfavorable conditions:**
 - 90-degree turn directly at outlet
 - Air turned against rotation of fan
 - Rain cover acts as outlet damper directly at outlet of ductwork
- **Better solution:**
 - UB fan discharge
 - No-loss rain stack

System Effects:

- **Unfavorable conditions:**
 - Air turned against rotation of the fan
 - Damper placed too close to elbow; laminar flow not yet achieved
- **Better solution:**
 - UB fan discharge
 - Move damper further from outlet to allow for evening of velocity profile

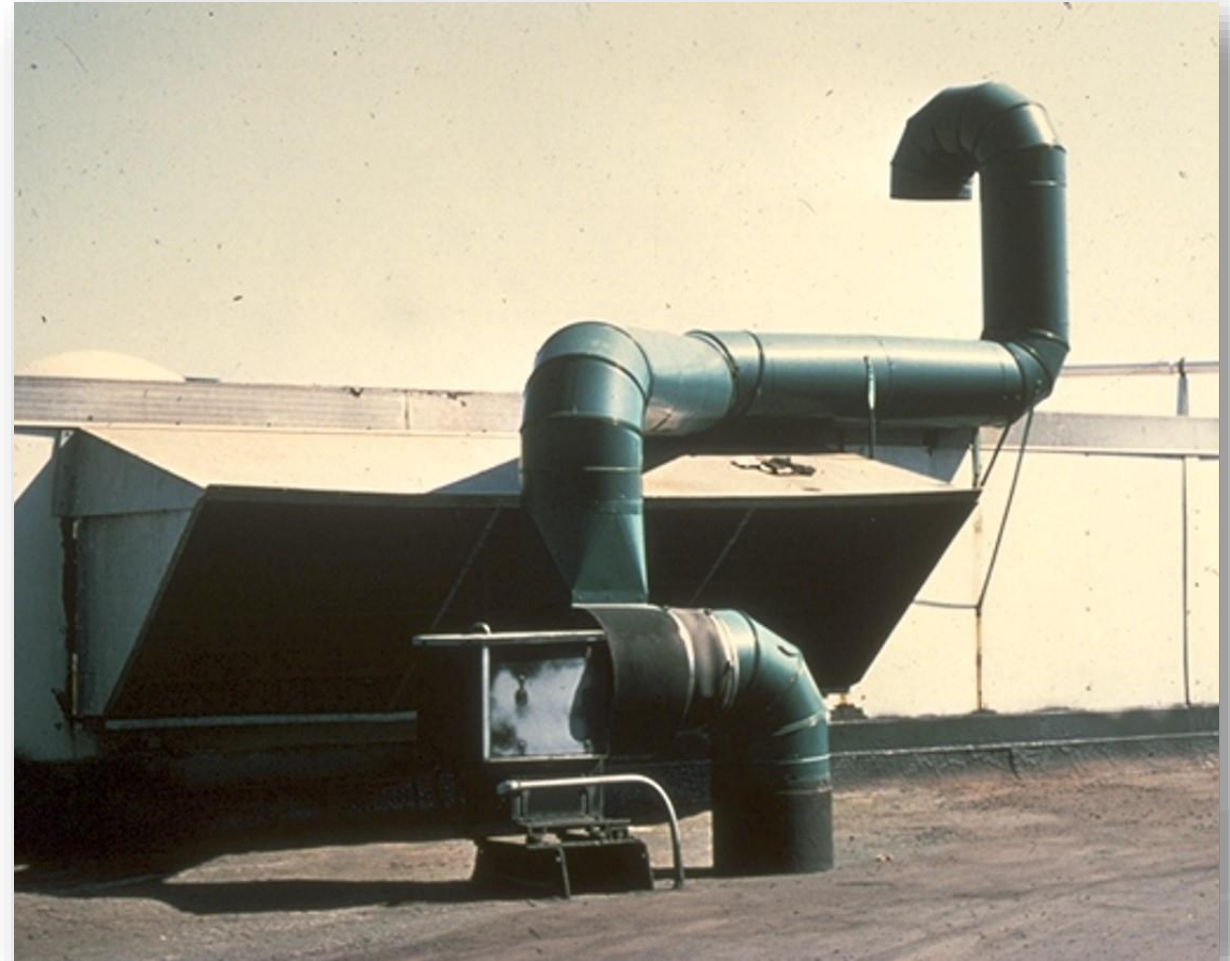

System Effects:

- **Unfavorable conditions:**
 - Poorly designed inlet box
 - No outlet ductwork
 - No flexible connector on fan inlet
- **Better solution:**
 - Factory designed inlet box
 - Add for outlet duct
 - Add for a flexible inlet connector

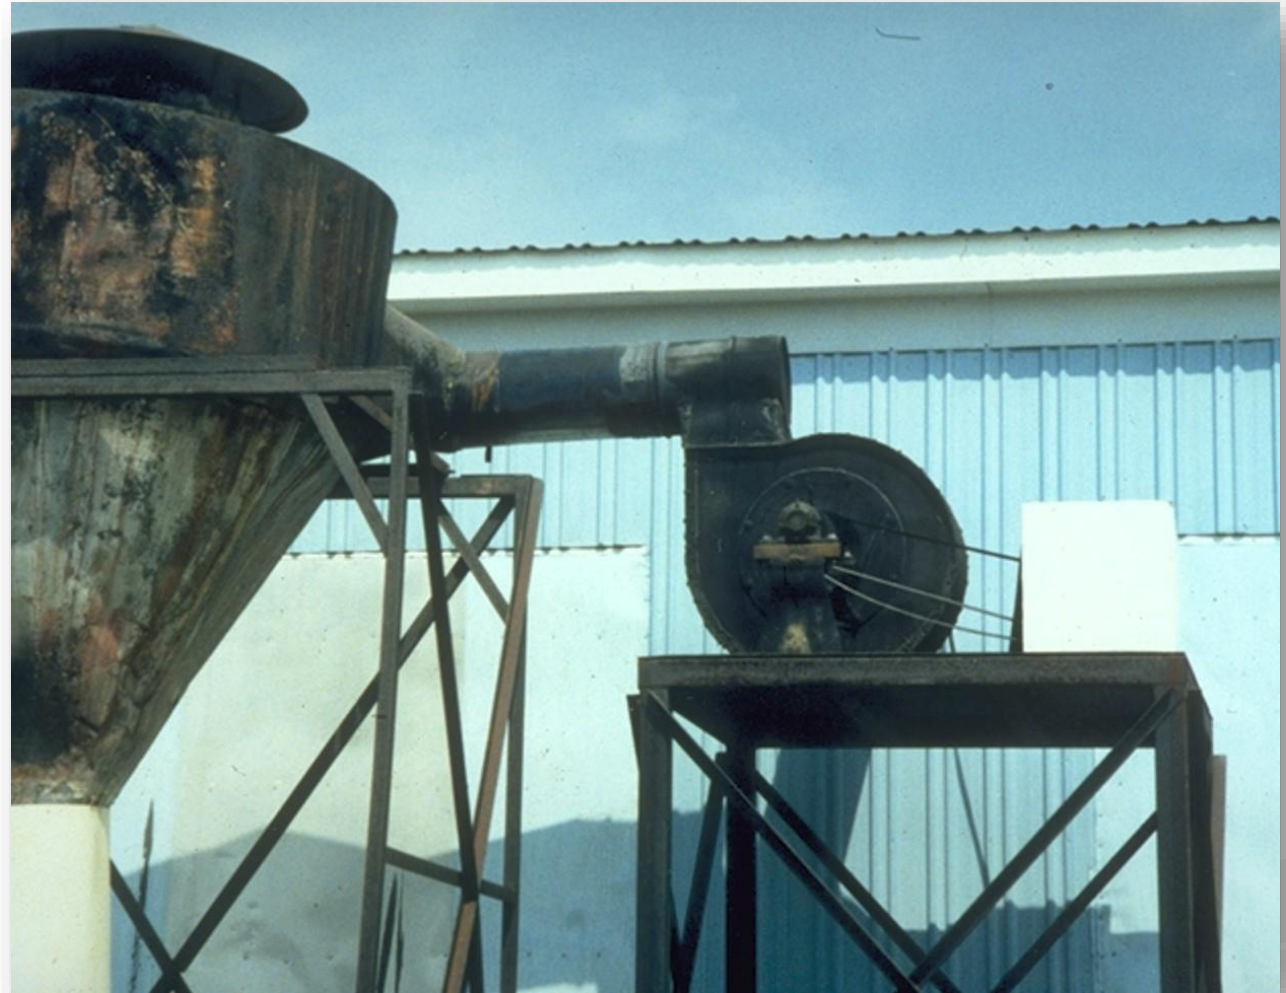

System Effects:

- **System Modification**
- **Unfavorable conditions:**
 - Exhaust air discharge moved to avoid fresh air intake
 - 90-degree elbow at inlet
 - Quick change of direction after fan outlet
- **Better solution:**
 - Transition with no-loss stack

System Effects:

- **Unfavorable conditions:**
 - Flimsy mezzanine doubles as flimsy unitary base
 - Fan deadheads into a 90-degree round elbow
- **Better solution:**
 - Change to CCW TH fan
 - Ensure mezzanine is stout and then mount fan on proper unitary base onto mezzanine

System Effects (not actually):

- Material Handling Fan
- Fan Operating Backwards

System Effects:

- Silencer at the fan inlet reduces transmitting of sound into factory
- Rectangular to round transition
- No loss rainhood

Q & A

Survey QR Code:

Thank you for your time!

*To receive PDH credit for today's educational session, you **must** complete the online evaluation, which will be sent to you via email within 7 days of this program.*

*PDH credits and participation certificates will be issued electronically **within 30 days**, once all attendance records are checked and the completed online evaluations are received.*

Attendees will receive an email at the address provided on your 2022 AHR Expo registration, listing the total credit hours awarded and a link to a printable certificate of completion.

If you have any questions, please contact Lisa Cherney, Education Manager, at AMCA International (lcherney@amca.org).

NEXT SESSION @ 10:30AM:

***Damper Application Manuals &
Fire/Smoke Damper
Updates***
