AMCA INTERNATIONAL SEEKS BSR/AMCA STANDARD 250 COMMITTEE MEMBERS

ARLINGTON HEIGHTS, Ill., April 3, 2018 - Air Movement and Control Association (AMCA) International Inc. announced it is seeking technical committee members for the revision of BSR/AMCA Standard 250—*Laboratory Methods of Testing Jet Tunnel Fans for Performance*.

The purpose of AMCA 250 is the determination of the technical characteristics needed to describe all aspects of the performance of jet tunnel fans. It does not cover those fans designed for ducted applications nor those designed solely for air circulation, e.g., ceiling fans and table fans. The test procedures described in this standard relate to laboratory conditions.

Committee members would be expected to participate in the drafting, review and resolution of all comments on the standard until the revised standard is approved by the membership. Most (possibly all) meetings will be by conference call via GoToMeeting.

For more information regarding this publication or to volunteer for this committee, please complete the commitment form here:

https://www.cognitofrms.com/AMCA1/_250TechnicalCommitteeInvitation3282018 or contact Erin Moore at emoore@amca.org or +1 (847) 704-6285 by April 28, 2018.

About AMCA International

Air Movement and Control Association (AMCA) International Inc. is a not-for-profit association of manufacturers of fans, dampers, louvers, air curtains, and other air-system components for commercial HVAC, industrial-process, and power-generation applications. With programs such as certified ratings, laboratory accreditation, verification of compliance, and international-standards development, its mission is to advance the health, growth, and integrity of the air-movement-and-control industry consistent with the interests of the public. For more information about AMCA, visit www.amca.org.
